

RAINGUARD™ RG-3000 HEADER SEAL

DOCK SHELTERS AND DOCK SEALS

PROTECT YOUR PRODUCTIVITY AND PROFITS

The RainGuard Header Seal by Rite-Hite is the most effective rain-diverting seal available, with rugged durability for long life.

Ordinary header seals typically allow some water into the loading dock area, especially with a declined approach.

The RainGuard Header tightly seals the top of the trailer, blocking water without restricting access.

RITE·HITE®

Keep bad weather outside
Improve safety and productivity inside

The RainGuard RG-3000 Header Seal gives your dock the best protection, providing a safer, more productive environment.

RainGuard, the most effective seal possible across the trailer top

The RainGuard RG-3000 provides the industry's most effective design to divert rain and melting snow off trailer tops, providing safer, more comfortable and more productive conditions on the loading dock.

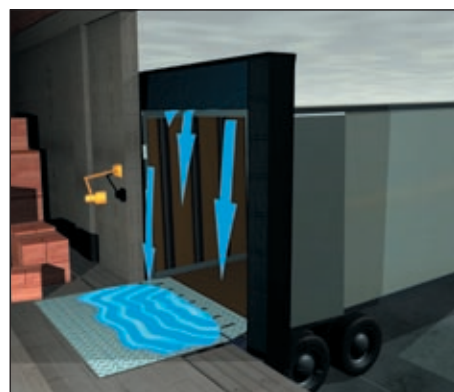

The latest advanced features give the RG-3000 higher durability and better sealing efficiency than any other rain-diverting seal available. A tight, consistent seal across the full width of the trailer top, plus built-in protection against damage and wear, make the RainGuard RG-3000 your best guaranteed value. Products, people and equipment stay dry with the rugged RainGuard RG-3000.

Poor seals can mean wet, icy floors and dock levelers – hazardous to personnel and equipment.

Inadequate seals can cause water damage and product contamination.

Ordinary head curtains cannot prevent the "Funnel Effect" when trailers approach down a decline during rain.

RAINGUARD™ RG-3000 HEADER SEAL

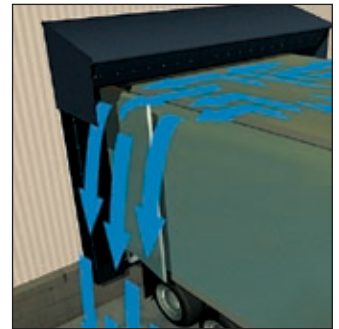

DOCK SHELTERS AND DOCK SEALS

Seals more trailers, more of the time.

- ▶ Widest coverage range available (380 mm) to seal variety of trailer heights, typically 3735 mm to 4115 mm
- ▶ Weighted, cylindrical sealing member provides consistent, uniform pressure across full width of trailer top
- ▶ Gravity-based seal adjusts to any trailer height or position, guaranteeing a tight seal is maintained
- ▶ Layered Neotec™ HMWPE impact plates can take thousands of trailer hits without damage
- ▶ Pivoting canopy header prevents damage to header and seal if trailer comes in off-center and higher than expected
- ▶ Simple design means easy installation and no maintenance

Automatic positioning

The weighted RainGuard seal adjusts automatically to the proper height as the trailer backs in, creating a tight, consistent seal across the full width of the trailer top. Effectively seals short and tall trailers alike. Every trailer the same tight seal.

RainGuard blocks the water out front before it becomes a problem inside.

RAINGUARD™ RG-3000 HEADER SEAL

DOCK SHELTERS AND DOCK SEALS

Protect your existing loading dock with a RainGuard retrofit.

Compatible with most dock shelters and dock seals

The RainGuard RG-3000 Header Seal is designed to work with virtually any existing equipment. So you can quickly upgrade your loading dock.

Fits almost all situations

When space limitations or base unit size present challenges, the RG-3000 can be configured to fit the situation. A smaller projection RainGuard still delivers 280 mm of coverage range and the ability to seal a wide variety of trailer heights.

Withstands harsh conditions

RainGuard's unique canopy header is built and tested to withstand extra heavy snow loads. Even in the toughest environments, RainGuard holds up.

See your Rite-Hite Representative today for more information on RainGuard and the full line of popular dock shelters and dock seals.
